WHAT IS MONKEYPOX?
Monkeypox is a viral infection transmitted through close personal contact, including kissing, sex, and other skin-to-skin contact. Fatality during the current outbreak is estimated to be very low.

WHAT ARE THE SYMPTOMS?
RASH, BUMPS, OR BLISTERS
These may appear anywhere on the body, including the genitals. This may look similar to syphilis, herpes, or other common skin rashes.

OTHER SYMPTOMS
FEVER & HEADACHES
MUSCLE ACHES
SWOLLEN LYMPH NODES

Symptom onset ranges from 5-21 days

WHAT YOU CAN DO

STAY INFORMED
Remain calm. This is a rapidly changing situation. Visit the CDC website for up-to-date guidance.

CONTACT
If you have symptoms, call (do not visit) your health care provider, and ask about testing.

ISOLATE
If you have symptoms, stay at home, wear a mask, and cover lesions to protect others.

ANYONE CAN GET MONKEYPOX
Targeting gay, bisexual, and other men who have sex with men may lead health care providers to miss monkeypox in other communities.

Information up-to-date as of May 27, 2022

CASES HAVE BEEN DETECTED AMONG GAY AND BISEXUAL MEN BUT NOT EXCLUSIVELY
